ENKA

With metal to the future...

WHO WE ARE?

As Enka Paslanmaz Makina, we are the solution to all of your machinery needs. Thanks to our many years in the industry, we provide a complete and effective service that will never disappoint our customers.

”

We have developed future-ready projects for many clients, and never heard a single dissatisfaction.

“

OUR SERVICES

SERVICE AND MAINTENANCE

We offer maintenance and service for the products we produced for you.

DESIGN AND PRODUCTION

If you have an idea or a dream in mind, let us make it a reality.

MODERNIZATION AND DEVELOPMENT

Are your machineries old now? Are you not getting enough performance? Let us replace them with newer and modern versions for you.

OUR PRODUCTS

”

As ENKA Paslanmaz Makina, we offer products that are produced with the highest quality materials and years of experience . Everything we produce here, from the idea stage to the implementation, is a source of pride for us. We are sure that you, like all our customers, will be satisfied with our products. We have compiled some of the products our company has produced so far for you .

CHEMICAL REACTORS

Reactors are tanks in which the ideal environment for the reaction is provided and heating, cooling, mixing processes can be done separately or together.

Used mainly in the chemical, pharmaceutical and food industry; These are systems that allow chemical reaction processes. They can operate under high pressure or vacuum, are mixed with special mixer blades, are subjected to heating or cooling processes. The mixture reacts homogeneously at certain temperatures, pressure and vacuum.

PILOT REACTOR UNITS

Reactors are tanks in which the ideal environment for the reaction is provided and heating, cooling, mixing processes can be done separately or together.

Pilot reactor units are more compact, smaller versions of these systems. It is used to produce smaller quantities of products and to experiment. They are generally used in R&D studies.

MIXERS

Mixers are used to obtain homogeneous mixtures. The product is obtained by mixing various liquid substances.

VERTICALLY ADJUSTABLE MIXERS

Mixers are used to obtain homogeneous mixtures. The product is obtained by mixing various liquid substances.

This one comes with an vertically adjustable base.

LAB MIXERS

Mixers are used to obtain homogeneous mixtures. The product is obtained by mixing various liquid substances.

This is portable lab version of our mixers.

POWDER MIXERS

Powder mixers are systems used to mix large quantities of powder products with each other. They are generally used in the detergent industry.

STAINLESS STEEL TANKS

Stainless steel storage tanks that you can use either outside or inside for storage purposes.

You can see the indoors version of them on the right.

STAINLESS STEEL TANKS

Stainless steel storage tanks that you can use either outside or inside for storage purposes.

You can see the outdoors version of them on the left.

SULFUR MELTING TANK

Sulfur melting tanks are specifically designed to melt sulfur in appropriate conditions.

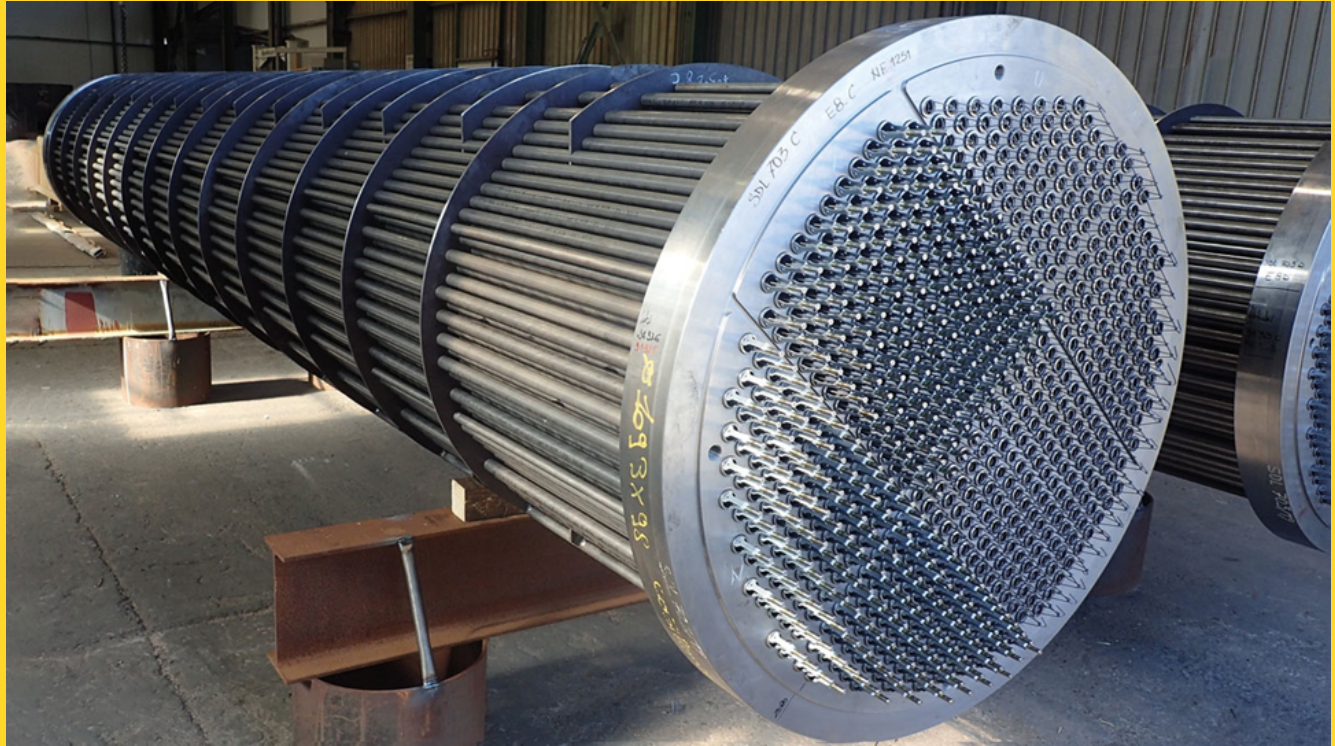

CONVEYOR BELT SYSTEMS

Systems that allow to transport materials from one place to another without the need for manpower.

HEAT EXCHANGERS

Heat exchangers are equipments that allows the temperature of fluids to be changed with another liquid or gas fluid. They can be used for heat exchange of products in many different phases.

PRESSURRED TANKS

They are tanks for keeping liquids and gases at a pressure different from the external pressure.

OIL WEIGHING AND DOSING SYSTEMS

These systems are specifically designed to equally weigh and dose oil type liquids.

FOULARD DRYING PRESS

Foulard drying presses are designed to dry washed cloth pieces by pressing them between two cylinders.

CONDENSERS

System that are designed to condense whatever liquid passes through them.

DECANTERS

These are tanks where the products that are condensed in the reactors and condensers are accumulated.

PLUMBING HEATING SYSTEMS

These systems are designed to heat water in the plumbing system of a production line.

MAGNETIC PRESS

Magnetic presses are used to test fabrics if they can be printed on.

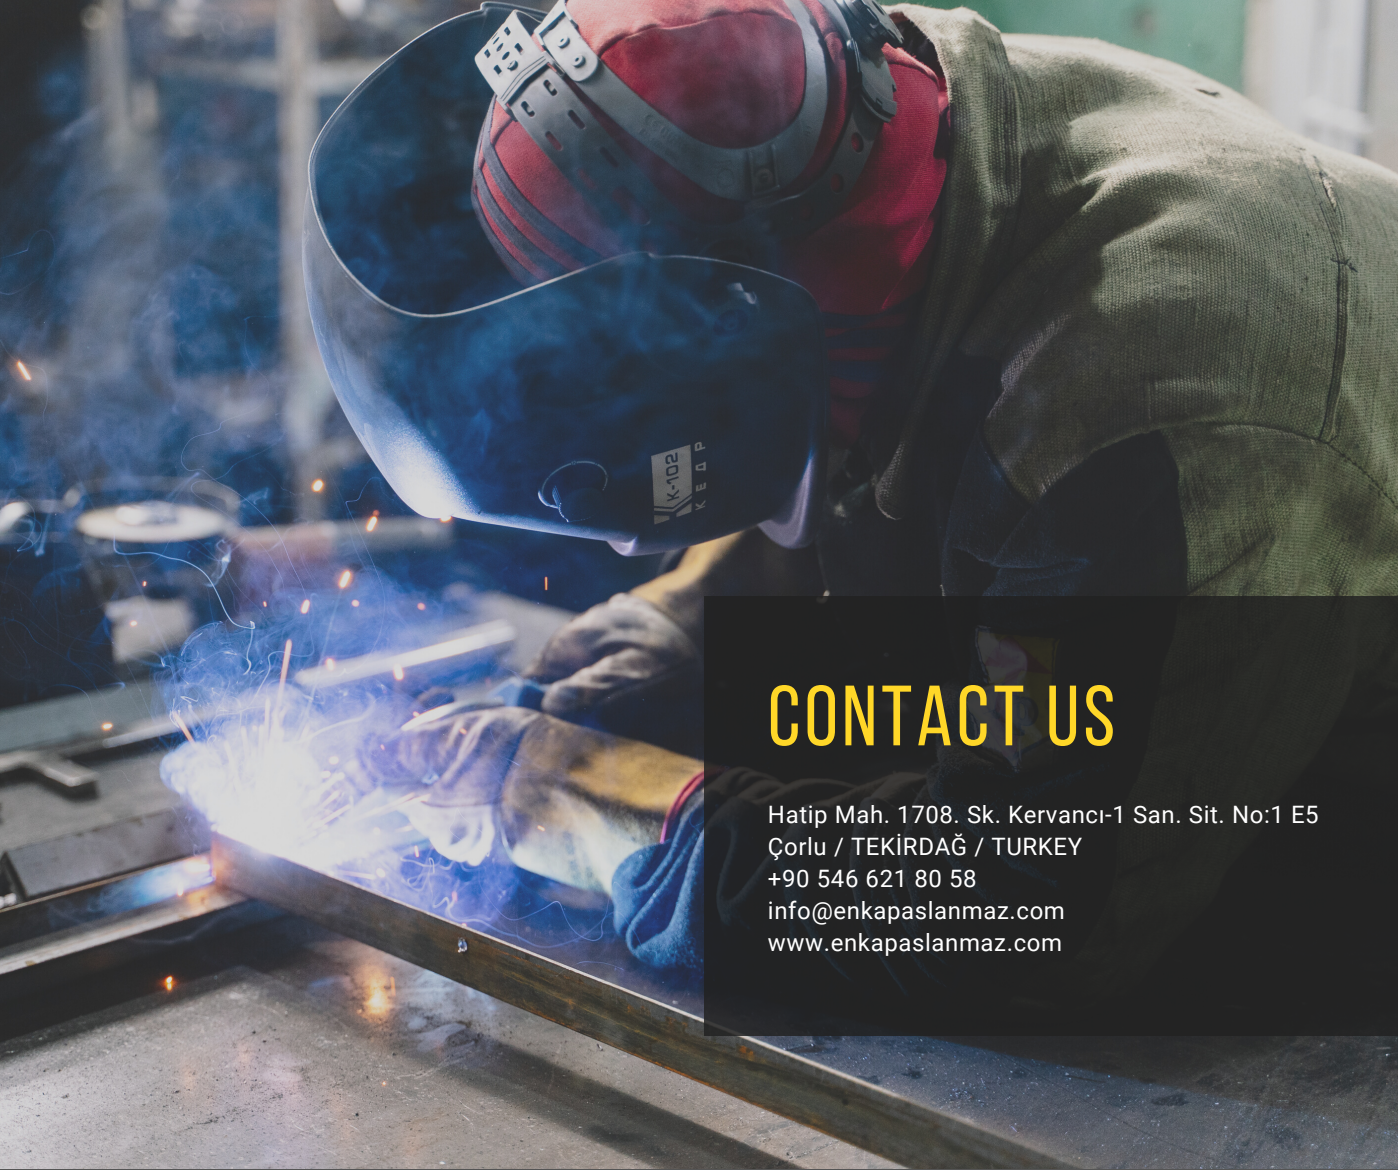

CHEMICAL PLANT INSTALLATION

We build chemical plants from scratch, with reactors, tanks, mixers and other systems you need.

- Feasibility and design
- Engineering and Project Management
- Bidding, Procurement, Setup
- Consultancy
